DIGITAL SOVEREIGNTY

Trustworthy AI: from certification to standardization

By Xavier Biseul

In anticipation of the future European regulatory framework, the AI Act, there has been a proliferation of initiatives and labels promoting ethical and responsible artificial intelligence. A standardization process has also been launched to produce harmonized standards at a European level within the next two years.

DIGITAL SOVEREIGNTY

The cybersecurity ecosystem fights for European digital sovereignty

By Patricia Dreidemy

Is sovereignty a mission impossible or the Holy Grail of digital technology? Not so much, says Hexatrust, a group of innovative cloud and cybersecurity companies, who presented its "manifesto for new digital ambitions" to the Minister of Digital Transition and Telecommunications on September 6, during the summer universities on cybersecurity.

CYBER CRIMINALITY

The real threat of unconventional cyberattacks

By Thomas Joos

Hackers and other cybercriminals are constantly looking for new ways to breach the security infrastructure of corporations and organizations and attack their networks, especially power and utility companies and other critical networks. In order to do so, new approaches rely on electromagnetic waves or scout targets by measuring energy consumption. However, a number of other ways to hack networks also pose a great threat, including to civilians. Overview of these unconventional cyberattacks.
